SQL Assignment 3
Due by April 13, 2017

- For each employee having a dependent, retrieve the employee's name along with his/her dependent name(s).

- For the department that controls more projects than any other department, retrieve its department number.

- For the department with more locations than any other department, retrieve its name and department number.

- Find the name of employee who supervises more employees than any other supervisor.

- Retrieve the name of each employee who has a dependent with the same first name and is the same sex as the employee. (Use join operations not nested query to answer this question)
